

Support material for TWIST Session 15:

NPS & NEW TRENDS IN DRUG TAKING

Background reading

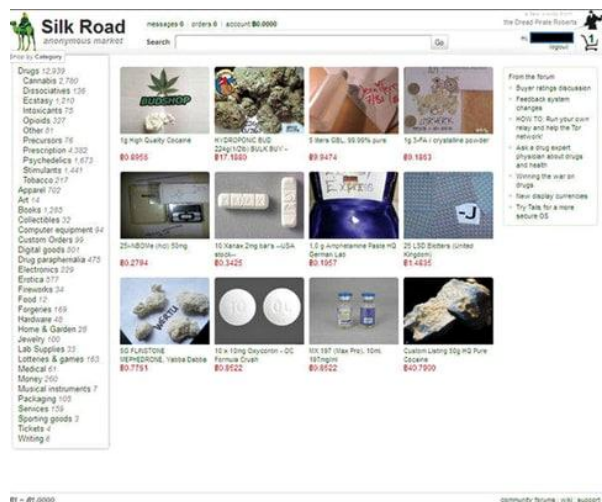

List of Presentations on New Psychoactive Substances at Lisbon Addictions 2017

There are 11 sessions covering New Psychoactive Substances or related areas at Lisbon Addictions 2017. The topics range from wastewater analysis to chemsex and are listed in the table below.

The programme starts on the first day with one Structured Session on “Early warning for New Psychoactive Substances” covering three systems (EU, USA, and Australia) put in place around the world to monitor new trends in drug use, including NPS. In the afternoon, there will be two parallel sessions, one highlighting the challenges for responses (including legislative and clinical); the other highlighting the latest trends across the EU and Australia.

On the second day, in parallel with our TWIST training sessions there will be two structured sessions in the morning where findings from the ESPAD study on NPS use among European students, and waste-water based epidemiology of NPS across Europe will be presented. Wastewater will also be covered during the lunchtime session along with other new methods, notably forum sentiment analysis.

On the third day, there will be further opportunities to learn about New Psychoactive Substances with four sessions covering the Darknet and online markets, further presentations on national early warning systems, and innovative methods in drug detection. Note that on the first day there is also a TWIST session on New Monitoring Tools which will cover topics relevant to NPS.

Sessions and presentations related to NPS in Lisbon Addictions 2017

NPS in LISBON 2017
